

Soccer Manager

This is an interactive visualization made with python plotly. This reads in data from publicly available data set at Kaggle of world's top rated soccer players. The visualization allows you to choose 2 players of your liking at a time. Then the radar graph allows you to compare the the most significant skills of the 2 players you chose.

As for the future work of this project, I will work on making this compatible to be viewed in any device. Right now, this appears as expected in mac computers, but when opened up in a windows computer or on a mobile phone, there are a few formatting issues with the images.

Overall, this is a fun visualization to play with for anyone, and specially if you are soccer fan. You can compare each others favourite player and have fun. Enjoy !!!!
